The global Portable Laser Cleaner market size is predicted to grow from US\$ 554 million in 2025 to US\$ 686 million in 2031; it is expected to grow at a CAGR of 3.6% from 2025 to 2031.

Portable Laser Cleaning Machine is more convenient and efficient when cleaning materials and parts such as machinery and metals. Laser cleaning is highly efficient and saves time. Compact and portable design, wearable, ergonomic, and can be operated by one person. No chemical reagents and cleaning fluids are needed, and the environmental pollution problem caused by chemical cleaning can be easily solved. Laser cleaning does not require polishing and is non-contact type. It has strong expandability, can replace the objective lens, change the focal depth, and the laser cleaning area is wider.

A portable laser cleaner is a portable and mobile laser cleaning device used to remove dirt, coatings, oxides or other undesirable substances on the surface. Compared with traditional laser cleaning equipment, portable laser cleaners are more portable and flexible, and can be used for cleaning operations in various places. Such equipment usually consists of a laser emitter, an optical system, a control system and a cooling system. The laser transmitter produces a laser beam with high energy density, the optical system focuses the laser beam on the cleaning target surface, and the control system controls the power and movement of the laser. In order to achieve precise control of the cleaning process, the cooling system is used for heat dissipation to ensure the stability of the equipment for a long time.
