The global Portable Leaf Blower market size is predicted to grow from US$ 674 million in 2025 to US$ 1021 million in 2031; it is expected to grow at a CAGR of 7.2% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

A portable leaf blower is a lightweight outdoor cleaning tool driven by a lithium-ion battery, which powers a high-speed motor to generate strong airflow for removing leaves, dust, and debris from lawns, patios, and hard surfaces. It offers advantages such as low noise, zero emissions, easy start-up, and minimal maintenance, making it ideal for residential users and gardening enthusiasts in urban or suburban areas.

The portable leaf blower market is experiencing rapid expansion, driven by growing urban landscaping needs, stricter environmental regulations, and advancements in lithium-ion battery technology. Compared to traditional gas-powered models, lithium versions offer low noise, zero emissions, and easy operation, making them increasingly favored by both homeowners and professional landscapers. North America currently leads global demand, while Europe follows closely; China remains a key manufacturing hub with low domestic adoption but high export volumes. Leading brands such as STIHL, EGO, and Greenworks are investing in extended battery life, variable speed control, and ergonomic enhancements, while also building battery platform ecosystems to lock in customer loyalty. Over the next 3–5 years, with declining battery costs and the integration of smart features, battery-powered blowers are expected to gradually replace gas models in residential use, marking a transition toward cleaner, quieter, and more user-friendly lawn care equipment.
