The global Portable PV Panel Cleaning Robot market size is predicted to grow from US$ 102 million in 2025 to US$ 236 million in 2032; it is expected to grow at a CAGR of 13.0% from 2026 to 2032.

Portable PV Panel Cleaning Robot is a lightweight and movable cleaning device designed for photovoltaic module operation and maintenance, focusing on flexible deployment, easy transport, quick setup, and repeated cleaning across different PV panel arrays. Compared with a general portable solar panel cleaning robot, this product definition more specifically emphasizes photovoltaic panel compatibility, distributed PV operation scenarios, roof-mounted PV maintenance, small ground-mounted PV plants, and sites where fixed cleaning systems are difficult to justify. It uses brush or dry-cleaning modules, battery-powered drive, sensing control, and compact structural design to remove dust, sand, bird droppings, and surface deposits while reducing labor intensity and improving cleaning consistency. In 2025, production was approximately 40,000 units and the average price was USD 2,600 per unit. The industry’s capacity utilization rate in 2025 was about 65% and the average gross margin was around 25%. Upstream, the key inputs include brushless motors, lithium batteries, sensors, and controllers, with representative suppliers such as Nidec, CATL, and Bosch providing drive motors, battery systems, sensing components, and control modules. The midstream segment focuses on lightweight structural design, portable drive system integration, PV panel walking mechanism development, cleaning module integration, battery endurance optimization, obstacle detection, route planning, dust and sand adaptability, waterproof and weather-resistant design, remote monitoring, safety testing, and automated assembly, which together determine cleaning efficiency, operating stability, handling convenience, PV panel compatibility, service life, and cost competitiveness. Downstream, Portable PV Panel Cleaning Robot is mainly used in

ground-mounted photovoltaic power stations and rooftop photovoltaic systems, with representative photovoltaic power generation companies including China Three Gorges Renewables, Enel Green Power, and NextEra Energy.

Portable PV Panel Cleaning Robot demand will be shaped by distributed photovoltaic expansion and the need for low-cost, flexible cleaning tools. Rooftop PV systems, industrial and commercial roofs, and small ground-mounted plants often have scattered layouts, limited access, and irregular cleaning cycles, making portable robots more practical than fixed cleaning systems. In large PV stations, they can also serve as supplementary equipment for special rows, edge zones, or maintenance teams. Customers will compare equipment by portability, setup speed, cleaning consistency, battery endurance, panel safety, weather resistance, maintenance cost, and adaptability to different PV installation structures.
