The global Portable Radiometers market size is predicted to grow from US\$ 274 million in 2025 to US\$ 504 million in 2032; it is expected to grow at a CAGR of 9.1% from 2026 to 2032.

In 2025, global Portable Radiometers production reached approximately 0.56 million units, with an average global market price of around US\$ 500 per unit. Annual production capacity is 0.8 million units. Gross Profit Margin: 36%. Portable Radiometers are compact, handheld or easily transportable instruments designed to measure electromagnetic radiation across specific wavelength ranges, such as ultraviolet (UV), visible light, infrared (IR), or broader solar radiation. The portable radiometers industry chain starts upstream with sensor and component suppliers, including photodiodes, thermopile detectors, optical filters, lenses, and semiconductor materials, along with electronic components such as microcontrollers and signal processors; midstream manufacturers integrate these components into calibrated portable radiometers through optical design, assembly, and software development, often incorporating data logging, wireless communication, and calibration services; downstream channels include distributors, scientific instrument suppliers, and direct sales to end-users such as environmental agencies, solar energy companies, industrial facilities, research laboratories, and healthcare institutions, where devices are used for on-site radiation measurement and monitoring. The portable radiometers market is evolving from standalone measurement devices toward integrated, data-driven sensing solutions, where connectivity, real-time analytics, and cloud integration are becoming as important as measurement accuracy.

United States market for Portable Radiometers is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
