Desktop range hoods are designed for use on a tabletop or in a small cooking area. They are usually small and portable, and can remove smoke efficiently. They can quickly absorb the fumes generated during cooking and process them through an efficient filtration system to ensure fresh air in the kitchen. In addition, tabletop range hoods are easy to clean and do not take up too much space, making them very suitable for small kitchens, apartments, dormitories, or outdoor cooking. The tabletop range hood uses a built-in motor to drive the fan to rotate, creating a negative pressure zone that draws the fumes generated during cooking into the range hood. When the fumes pass through the filter system, grease and particulate matter are separated, and clean air is discharged through the air outlet.
