## Abstracts

The global Portable Smoke Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

A handheld smoke machine, also known as a portable smoke generator or fog machine, is a device used to produce artificial smoke or fog. It is typically a compact and lightweight device that can be easily carried and operated by hand. The smoke machine heats a fog fluid or special smoke liquid, converting it into a vapor or aerosol that resembles smoke or fog.

The industry trend involves continuous technological advancements in handheld smoke machines, such as improvements in heating elements and electronics, more efficient power consumption, better control systems, and improved safety features. There is an increasing emphasis on environmentally friendly options in the entertainment and event industry. Manufacturers and users of smoke machines are seeking smoke fluids or fog liquids that are non-toxic, biodegradable, and do not harm the environment. Some products may also focus on reducing energy consumption or incorporating more eco-friendly materials. As event production becomes more sophisticated, there is a growing trend towards integrating handheld smoke machines with automation and control systems. This allows synchronized smoke effects with other lighting and sound elements, contributing to more immersive experiences. The industry trend towards wireless and portable equipment also extends to handheld smoke machines. This enables easier setup, mobility during performances or events, and fewer cables or wires for a cleaner aesthetic.
