The global Portable Socket Testers market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The socket tester is a device used for socket testing. Its inspection function is that when the test button is pressed, if the circuit is normal, the leakage switch of the control circuit should trip immediately. If the test button is pressed, the leakage switch does not work, there are two reasons: the first is that the neutral wire and the ground wire of the detected socket are wrongly connected to each other, in this case, the plug indicates that the connection is correct, but the leakage switch will not work. The second is that the wiring in the tested socket is completely correct, but the leakage switch on the line fails and needs to be repaired or replaced.

United States market for Portable Socket Testers is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
