Portable Track Gauge is a special measuring instrument used to measure the gauge between two rails on a railway line. It combines the characteristics of portability and high-precision measurement and is widely used in the maintenance and inspection of railway lines?. Its main function is to measure the track gauge and superelevation (level) of railway tracks. It is suitable for temporary inspection of public works, fine adjustment of track gauge, track construction inspection and station inspection operations. From traditional wooden rulers to modern electronic rulers, portable railway gauges have experienced significant technological progress. Modern electronic track rulers can automatically find the minimum track gauge, provide accurate track gauge refinement data, and significantly improve work efficiency and labor efficiency. In addition, the electronic ruler has a compact design and comprehensive functions, which can adapt to various application scenarios, further promoting its application in railway engineering.
