The portable wire feeder is an integrated and lightweight welding auxiliary device designed to meet the demand for stable wire delivery in mobile welding operations. Its core function is to continuously feed welding wire into the welding zone at a preset speed and tension through the coordinated action of mechanical transmission mechanisms and drive motors, ensuring the continuity of the welding process and arc stability. The device features a compact structural design with a replaceable wire spool holder and tension adjustment module, supporting rapid loading and parameter adaptation for different wire specifications. Equipped with a portable power interface (e.g., battery pack or external adapter) and a lightweight housing, it is suitable for manual arc welding, gas-shielded welding, and other processes in complex environments such as field engineering, aerial operations, and ship repair. By optimizing transmission efficiency and wire feeding accuracy, the portable wire feeder significantly enhances the flexibility, efficiency, and weld quality of mobile welding operations, representing a key advancement in the lightweight and modular development of modern welding technology.
