The global Position Sensors for The Aerospace market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Sensors are devices and devices that can sense the specified measured signals and convert them into usable output signals according to certain rules. They are the front end of measurement technology and the source of information technology. Sensors are widely used in the aviation field. Position sensors are mainly used in the field of position sensing, rotation speed and angle detection.

As orders grow, aircraft OEMs are ramping up aircraft production rates above pre-pandemic levels. Airbus plans to boost production of the A320 family to 65 a month by 2023. It is considering increasing production to 75 a month by 2025. It hit 60 per month in 2019, then dropped to 40 per month in 2020 due to the COVID-19 pandemic. The increase in aircraft deliveries will directly drive the aerospace position sensors market.

In the aerospace industry, according to statistics from the Satellite Industry Association (SIA), since 2014, the revenue scale of the global aerospace industry has continued to grow. By 2021, the revenue scale of the global aerospace industry will be US$386.4 billion, a year-on-year increase of 4.1%. According to the research data of our company, in 2022, the national satellite industry will account for 73% of the aerospace industry, and the non-satellite industry will account for 27%. In 2023, China Aerospace Science and Technology Corporation will release the 'Blue Book on China's Aerospace Science and Technology Activities (2022)', emphasizing that China's aerospace applications
