The global Positive-displacement Hydrogen Compressor market size is predicted to grow from US\$ 311 million in 2025 to US\$ 383 million in 2031; it is expected to grow at a CAGR of 3.5% from 2025 to 2031.

A positive-displacement hydrogen compressor is a type of compressor specifically designed to handle hydrogen gas. It operates based on positive-displacement principles, which means it traps a fixed volume of gas and then decreases the volume to compress the gas to a higher pressure. These compressors are crucial in various industrial applications where high-pressure hydrogen gas is required, such as hydrogen refueling stations, chemical processing, and industrial hydrogen storage.

The global transition towards clean and renewable energy sources has driven the demand for hydrogen as a clean fuel. Positive-displacement hydrogen compressors play a crucial role in hydrogen infrastructure, including hydrogen production, storage, and refueling stations, to meet the growing demand for hydrogen energy.
