The global Positive Torque Limiter market size is predicted to grow from US\$ 329 million in 2025 to US\$ 417 million in 2032; it is expected to grow at a CAGR of 3.4% from 2026 to 2032.

A positive torque limiter is a mechanical or electromechanical safety device used in power transmission systems to restrict maximum forward torque output. When the transmitted torque exceeds a preset threshold, it automatically slips, disengages, or interrupts power transmission to prevent overload damage. It protects motors, gearboxes, and drive shafts while ensuring stable power output and avoiding structural damage caused by shock loads or stalling conditions.

Upstream includes alloy steel materials, friction discs or spring components, precision machining processes, and in some cases electronic sensing elements. Downstream applications cover industrial automation equipment, construction machinery, and drive system manufacturing. The overall industry gross margin generally ranges from 25% to 45%, with higher margins for high-precision adjustable and intelligent monitoring models.

In 2025, the global production of positive torque limiters is estimated at 802,000 units, with an average price of \$420 per unit.

United States market for Positive Torque Limiter is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
