The global Positive/Negative Meniscus Lens market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Meniscus lens is a lens which has two spherical curved surfaces, convex on one side and concave on the other side. It is thicker at the center than at the edges. The lens provides a smaller beam diameter in order to reduce the beam waste and spherical aberration. Positive meniscus lenses have a shorter radius of curvature on the convex surface than the concave surface and negative meniscus lenses have the opposite. Positive meniscus lenses are used to reduce the focal length and spherical aberration reduction while negative meniscus lenses are used to expand the beam.

United States market for Positive/Negative Meniscus Lens is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
