PET scanner is a type of nuclear medicine imaging. The scan uses a special dye that has radioactive tracers.

Positron-emission tomography (PET) is a nuclear medicine functional imaging technique that is used to observe metabolic processes in the body. The system detects pairs of gamma rays emitted indirectly by a positron-emitting radionuclide (tracer), which is introduced into the body on a biologically active molecule. Three-dimensional images of tracer concentration within the body are then constructed by computer analysis. In modern PET-CT scanners, three-dimensional imaging is often accomplished with the

aid of a CT X-ray scan performed on the patient during the same session, in the same machine.

Market competition is intense. GE, Siemens Healthcare, Philips Healthcare are the leaders of the industry. The clear market leader is GE, which holds a 37% market share. In second place is Siemens Healthcare with a 39% market share, while Philips Healthca?
