Post-consumer recycled yarn refers to yarn made from textiles or plastic products (such as old clothing, discarded carpets, and PET bottles) that have been used and discarded by consumers. This type of raw material typically undergoes a complete consumer lifecycle, involving collection, sorting, cleaning, crushing, re-pelletization, or spinning. Compared to pre-consumer recycling, post-consumer recycling faces greater challenges in impurity handling and quality control, but it offers greater environmental value and can significantly reduce the environmental burden of textile landfill and incineration. This type of yarn is widely used in clothing, home furnishings, automotive, and industrial applications, and is a key material driving sustainable development in the textile industry.

United States market for Post-Consumer Recycled Yarn is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Post-Consumer Recycled Yarn is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
