The global Post Processing System for Pouch Lithium-ion Battery market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The post-processing of the lithium battery is to activate, test and judge the quality of the battery after the battery is completed.

Specifically, it includes the formation, capacity division, and sorting of the battery cells. After post-processing, the battery cells can reach a usable state. Depending on the production process, the number of charging and discharging of the battery cell is not exactly the same, but at least twice, the first time is formation, and the second time is capacity division. Formation and capacity separation detection have a very significant impact on the performance of lithium batteries. The temperature and current accuracy control capabilities of formation equipment also determine the final performance parameters of the battery. The control and detection accuracy, long-term stability, and reliability of capacity separation equipment Safety and safety have a significant impact on the quality, production pass rate, production efficiency and safe production of the battery manufacturing process.

China's policy on lithium-ion batteries mainly focuses on lithium-ion batteries. In 2015, in order to strengthen the management of lithium-ion battery industry and improve the development level of the industry, China formulated the Standard of Lithium-ion Battery Industry. the global sales of new energy vehicles reached 10.8 million units in 2022, with a year-on-year increase of 61.6%. In 2022, China new energy vehicle sales reached 6.8 million units, and the global share increased to 63.6%. In Q4 2022, sales penetration rate of China's new energy vehicle reached 27%, while the global average

penetration rate was only 15%. Europe penetration was 19%, and North America penetration rate was only 6%. Lithium batteries will fully benefit from the high growth of downstream demand. According to the Ministry of Industry and Information Technology, China's lithium-ion battery production reached 750 GWh in 2022, up more than 130 percent year on year. Among them, the output of lithium energy storage battery exceeded 100 GWh, and the total output value of the industry exceeded 1.2 trillion yuan. The industrial application of lithium battery was also growing rapidly. In 2022, the loading capacity of new energy vehicle power battery was about 295 GWh, and the new energy vehicle power battery was about 295 GWh. According to our research, in 2022, the overall global lithium-ion battery shipments were 957GWh, a year-on-year increase of 70%. Global vehicle power battery (EV LIB) shipments were 684GWh, a year-on-year increase of 84%; Energy storage battery (ESS LIB) shipments were 159.3GWh, a year-on-year increase of 140%.
