A post-surgical adhesion barrier is a medical product applied after surgery to prevent the formation of adhesions, which are abnormal bands of scar tissue that can develop between internal organs and tissues. Adhesions can cause pain, restricted movement, or complications such as bowel obstructions. These barriers are typically made from biocompatible materials, such as synthetic polymers or collagen-based substances, that create a physical barrier between tissues, reducing friction and the risk of tissue sticking together during the healing process. Post-surgical adhesion barriers are commonly used in abdominal, pelvic, and gynecological surgeries to improve patient recovery and outcomes.
