## Abstracts

The global Post-Tensioning Anchorage System market size is predicted to grow from US\$ 1261 million in 2025 to US\$ 1805 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

The Post-Tensioning Anchorage System is a key structural subsystem in post-tensioned concrete, consisting of anchor heads, wedges, bearing plates, trumpet ducts, and associated components. It is used to permanently transfer and lock the prestressing force from steel tendons into hardened concrete after stressing, ensuring long-term structural integrity and load transfer performance. In 2025, global Post-Tensioning Anchorage System production reached approximately 108.02 M Units. The Post-Tensioning Anchorage System industry follows a ?heavy materials ? precision casting ? engineering system integration? value chain. Upstream consists of ductile iron, alloy structural steel, forged steel components, and anti-corrosion coatings, which determine the mechanical strength and fatigue performance of anchorage products.

The Post-Tensioning Anchorage System market is a critical sub-segment of the post-tensioned concrete industry, driven by global infrastructure investment, urbanization, and large-scale construction projects. Demand is primarily concentrated in bridge engineering and high-rise buildings, with multi-strand anchorage systems representing the dominant product type. Chinese manufacturers dominate cost-sensitive segments, while European companies lead in high-end infrastructure applications. Future growth is expected to be driven by infrastructure expansion in emerging economies, increasing adoption of prefabricated construction, and rising demand for long-span bridges and nuclear energy structures.
