Post-wave soldering AOI is an inspection device used after the wave soldering process. It can automatically detect and identify soldering defects on PCBA (printed circuit board assembly), such as excess tin, insufficient tin, bridging tin, voids, tin beads, etc. Through high-resolution cameras and sophisticated image processing algorithms, the device can scan and analyze a large number of solder joints in a short period of time to ensure that the quality of the solder joints meets the standards. Its advantages are improved inspection efficiency, reduced manual inspection costs, and reduced defective product outflow, thereby improving production efficiency and product reliability.

United States market for Post-Wave Soldering AOI is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
