The global Potassium Benzoate market size is predicted to grow from US\$ 29.2 million in 2025 to US\$ 40.9 million in 2031; it is expected to grow at a CAGR of 5.8% from 2025 to 2031.

Potassium benzoate (E212), Cas 582-25-2, the potassium salt of benzoic acid, is a food preservative that inhibits the growth of mold, yeast and some bacteria. It works best in low-pH products, below 4.5, where it exists as benzoic acid. Acidic-foods and beverages such as fruit juice (citric acid), sparkling drinks (carbonic acid), soft drinks (phosphoric acid), and pickles (vinegar) may be preserved with potassium benzoate.

The global potassium benzoate (Cas 582-25-2) market is dominated by North America, with a market share of about 48%, and Europe is the second largest market in the region. The main manufacturers are Emerald Kalama Chemical, Tengzhou Tenglong Chemical and T A.M Food Chemical, and the top three account for more than 65% of the global market. In terms of consumption, North America is the largest consumer, and the second is the European market.

It is expected that food-grade potassium benzoate will continue to maintain an absolute dominant position for a long time to come. In terms of application, food and beverage applications are the largest application market for potassium benzoate.

As an effective food preservative, potassium benzoate is widely used in various foods and beverages to extend the shelf life and meet consumers' demand for safety and freshness. With the development of the global economy, the demand for consumer goods has risen, especially in emerging market countries, which has driven the demand for potassium benzoate.
