Potassium carbonate anhydrous is also known as potash. The product is available as a granulate or powder and is used in various markets such as the pharmaceutical, food and agricultural industries. Other technical applications include the production of crystal glass and the dying industry.

According to the web search results, one of the main drivers for the food grade potassium derivatives market is the growing demand for potassium carbonate in the food industry. Potassium carbonate is used as an enhancer for taste and can replace sodium salt in some applications. It is also used in the production of confectionery products, such as chocolates and sweets, as well as alcoholic and non-alcoholic beverages, including functional drinks. Another driver for the food grade potassium derivatives market is the increasing use of potassium hydroxide in various food processing applications, such as peeling, washing, and cleaning of fruits and vegetables. Potassium hydroxide is also used as a pH regulator and a stabilizer in food products.
