Potassium carbonate hydrate is a versatile product. Synonyms that are used include potash, potassium carbonate water or potash hydrate. Potassium carbonate hydrate ($K_2CO_3 \cdot 1.5 H_2O$) is used by in technical applications as well as an additive in animal feed. In the production of glass, potassium carbonate hydrate helps to improve crucial characteristics of the material. It provides excellent clarity and is therefore used for glasses, monitors and also televisions. In high quality glassware it helps the glass to sparkle, and with an improved transparency good drinks get the stage they deserve. In other glass applications potassium carbonate hydrate helps to improve the heat resistancy of glass or the optical characteristics in glass used for lenses in cameras or microscopes as well as in eyeglasses. In ceramics, potassium carbonate hydrate is used in glazes as a color modifier. Technical applications also include the use as grit that is spread over icy roads in winter. Unlike salt it doesn't damage stone and is therefore a good alternative, especially around historically valuable places. Applied in animal feed, Potassium carbonate hydrate is beneficial as it helps sweating animals to regulate their potassium balance.

According to the web search results, one of the main drivers for the food grade potassium derivatives market is the growing demand for potassium carbonate in the food industry. Potassium carbonate is used as an enhancer for taste and can replace sodium salt in some applications. It is also used in the production of confectionery products, such as chocolates and sweets, as well as alcoholic and non-alcoholic beverages, including functional drinks. Another driver for the food grade potassium

derivatives market is the increasing use of potassium hydroxide in various food processing applications, such as peeling, washing, and cleaning of fruits and vegetables. Potassium hydroxide is also used as a pH regulator and a stabilizer in food products.
