Potassium-competitive acid blockers (P-CABs) are a class of novel gastric acid-suppressing drugs that selectively inhibit the binding of potassium ions at the gastric parietal cell proton pump (H?/K?-ATPase), thereby reducing acid secretion. They offer advantages such as rapid onset, sustained action, minimal interpatient variability, and independence from activation in an acidic environment, making them suitable for the treatment of gastroesophageal reflux disease, peptic ulcers, and other acid-related conditions. The upstream supply chain includes fine chemicals, intermediates, and high-purity reagents required for active pharmaceutical ingredient (API) synthesis, as well as excipients, packaging materials, and capsule shell manufacturers for formulation; in addition, specialized pharmaceutical equipment and analytical instruments used in synthesis and quality control form an essential foundation supporting the development, manufacturing, and commercialization of these drugs. In 2024, the global sales volume of potassium-competitive acid blockers reached 34.514 million boxes, with an average unit price of USD 35 per box.

United States market for Potassium-Competitive Acid Blockers is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
