The global Potassium Titanyl Phosphate (KTP) market size is predicted to grow from US\$ 151 million in 2025 to US\$ 226 million in 2032; it is expected to grow at a CAGR of 6.1% from 2026 to 2032.

Potassium titanyl phosphate (KTP) is a ferroelectric nonlinear optical crystal with the chemical formula KTiOPO_4 . Its core function is to enable efficient nonlinear frequency conversion processes such as second-harmonic generation, sum-frequency generation, and optical parametric oscillation in laser systems. KTP features a relatively high nonlinear coefficient, good thermal stability, and strong resistance to optical damage, making it widely used as a green light frequency-doubling crystal in solid-state lasers.

The material is typically produced in single-crystal form using hydrothermal growth or high-temperature solution growth methods. Key technologies include high-purity raw material control, stable crystal growth interface management, defect density suppression, precision orientation cutting and polishing, and mitigation of gray tracking effects.

Upstream suppliers include high-purity chemical material providers, crystal growth equipment manufacturers, and precision processing enterprises. Downstream applications cover frequency-doubling modules for Nd:YAG solid-state lasers, medical laser systems, industrial laser processing equipment, and scientific optical research platforms. The overall industry gross margin generally ranges from 40% to 65%, positioning it within the nonlinear optical crystal materials segment.

In 2025, the global production of potassium titanyl phosphate (KTP) crystals was 640 kg, with an average price of US\$240,000 per kg.

United States market for Potassium Titanyl Phosphate (KTP) is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Potassium Titanyl Phosphate (KTP) is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Potassium Titanyl Phosphate (KTP) is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
