A potentiometer liquid level sensor is a sensor used to measure the liquid level height or liquid level change of a liquid. It uses the potentiometer principle to convert the liquid level height or liquid level change into an electrical signal output. When using a potentiometer liquid level sensor for liquid level measurement, a float or float rises or falls as the liquid level changes, causing the potential value in the potentiometric sensor to change. The sensor measures this potential change and converts it into a

corresponding electrical signal output. By measuring the change of the potential signal, the liquid level height or the liquid level change of the liquid can be determined.
