Poultry Coccidiosis Vaccines are specialized vaccines designed to prevent coccidiosis in poultry, a parasitic disease caused by protozoa such as *Eimeria* species that infect the intestinal tract of chickens, turkeys, and other poultry. These vaccines stimulate the immune system of poultry to develop resistance against coccidiosis, effectively reducing disease incidence and improving growth performance and feed conversion rates. Poultry coccidiosis vaccines are a crucial tool for controlling this disease and offer a safer and more environmentally friendly alternative to traditional anticoccidial drugs, with the added benefit of reducing the risk of drug resistance. They are widely used in modern intensive poultry farming.
