## Abstracts

The global Poultry House Lighting System market size is predicted to grow from US\$ 1251 million in 2025 to US\$ 2433 million in 2032; it is expected to grow at a CAGR of 10.2% from 2026 to 2032.

A poultry house lighting system is an integrated illumination solution designed to optimize light intensity, photoperiod and spectrum for broilers, layers and breeders. Modern systems primarily use LED fixtures with dimming, programmable photoperiods and sensor-based automation to improve feed conversion, laying performance, flock uniformity and animal welfare. In 2024, the global average system price is approximately US\$95 per installation, with total deployments reaching around 12.4 million systems. Industry gross margins typically range from 28%–42%, influenced by LED efficiency, optical design, durability, smart controllers and integration with environmental management systems. The supply chain includes upstream LEDs, drivers, optical lenses, cables, sensors and controllers; midstream manufacturers provide lamp assembly, system integration, farm-grade waterproofing and installation kits; downstream customers include poultry farms, integrators, livestock equipment distributors and smart-agriculture solution providers.

The poultry house lighting system market has been experiencing significant growth and is expected to continue to do so in the coming years. This trend can be attributed to several factors: Increasing demand for poultry products: The global demand for poultry products, such as chicken and eggs, is on the rise due to factors such as population growth, urbanization, and changing dietary preferences. Poultry farmers are looking for ways to optimize production and improve the welfare and productivity of their flocks, leading to the adoption of advanced lighting systems.
