The global Poultry Housing System market size is predicted to grow from US\$ 1973 million in 2025 to US\$ 3173 million in 2032; it is expected to grow at a CAGR of 7.2% from 2026 to 2032.

The Poultry Housing System involves rearing of poultry on raised wire netting floor in smaller compartments, called cages, either fitted with stands on floor of house or hanged from the roof. It has been proved very efficient for laying operations, right from day-old to till disposal.

The largest increase in consumer demand for poultry will drive the rapid development of the Poultry Housing System industry. This is due to poultry's more affordable price and the fact that it's quick and easy to cook, with the meat containing little fat and lots of protein. This growth has occurred in both industrialized and emerging countries.
