The global Powder for Inhalation market size is predicted to grow from US$ 13900 million in 2025 to US$ 19170 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

Powder for inhalation (used in dry powder inhalers, DPIs) delivers active pharmaceutical ingredients as respirable powders driven by patient inhalation and is widely used for local treatment of respiratory diseases (asthma, COPD) and selected systemic applications (e.g., inhaled insulin). Key technical challenges are particle-size distribution, powder flow/dispersibility, physical stability and device–formulation compatibility (capsule-based, blister, or multi-dose devices); common manufacturing technologies include spray-drying, spray-freeze-drying and particle-engineering approaches to achieve the required aerosol performance. Upstream inputs include inhalation-grade APIs (with tight impurity/residual-solvent specs) and lung-safe excipients — lactose remains the predominant carrier in many commercial formulations — and many projects outsource formulation development and scale-up to specialized CDMOs.

In 2024, the global market average price for Powder for Inhalation was USD 26.7 per unit, with a total sales volume of 512 million units.

United States market for Powder for Inhalation is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Powder for Inhalation is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Powder for Inhalation is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
