The global Powder ALD market size is predicted to grow from US$ 158 million in 2025 to US$ 250 million in 2031; it is expected to grow at a CAGR of 7.9% from 2025 to 2031.

Powder ALD is a precision film deposition system that utilizes a unique chemical vapor deposition technology to achieve atomic-level film growth by precisely controlling the adsorption and desorption processes of reactants on the powder surface. The device is designed with accurate temperature control and gas flow control systems to ensure the uniformity and repeatability of the deposition process. Powder ALD is capable of high-quality film deposition at low temperatures, reducing the side effects of heat treatment, and it possesses the ability to control film thickness with high resolution and precision. Its working principle is based on self-limiting surface chemical reactions, where alternating introduction of two different reactant gases enables layer-by-layer stacking for film growth, thereby forming a uniform and dense film layer on the surface of powder particles. Powder ALD stands out for its superior film quality and precise process control, making it a high-end product in the field of film preparation technology.

United States market for Powder ALD is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Powder ALD is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
