With growing demand in downstream market, the Powder-based Industrial Coating is forecast to a readjusted size of US$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global Powder-based Industrial Coating market. Powder-based Industrial Coating are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Powder-based Industrial Coating. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Powder-based Industrial Coating market.

Powder coating is a solid powdery synthetic resin coating composed of solid resin and pigment, filler and auxiliary. Unlike ordinary solvent-based coatings and water-based coatings, its dispersion medium is not solvent and water, but air. It has the characteristics of no solvent pollution, 100% film formation, and low energy consumption. Powder-based industrial coatings are highly efficient and are more resistant to chipping, scratching, fading and abrasion than other finishes. The VOCs released to the environment by this process are negligible and require less curing time beyond the cooling time. Low-VOC emissions from powder-based industrial coatings provide superior performance and cost-effectiveness for applications requiring maximum wear resistance and hardness.
