## Abstracts

The global Powder Metallurgy Contact market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

At present, powder metallurgy is receiving increasing attention in the preparation process of contact materials and has become the main manufacturing process for contact materials. This method can be used to produce a series of contact products such as silver tungsten, copper tungsten, silver tungsten carbide, silver tungsten carbide graphite, silver nickel, silver nickel graphite, silver graphite, silver metal oxide, etc. The composition and quality of contact products prepared by powder metallurgy are easier to control than other process methods, ensuring the consistency of contact product performance. By using advanced powder production processes such as chemical coating, co precipitation, atomization, and mechanical alloying, other component particles are refined and evenly distributed in the silver or copper matrix, which is beneficial for improving the metallographic structure of contact materials and enhancing the performance of contact products.

United States market for Powder Metallurgy Contact is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Powder Metallurgy Contact is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
