Powdered Activated Carbon (PAC) Filters are water and air purification systems that use finely ground activated carbon particles to remove impurities, contaminants, and odors from liquids or gases. PAC has a high surface area and porous structure, allowing it to adsorb a wide range of organic compounds, chlorine, pesticides, pharmaceuticals, and other pollutants. In filtration systems, PAC is typically added directly to water or integrated into filter media, where it binds with contaminants, improving taste, odor, and overall water quality. These filters are widely used in municipal water treatment, industrial processing, wastewater management, and home filtration systems for efficient and cost-effective contaminant removal.

United States market for Powdered Activated Carbon (PAC) Filters is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Powdered Activated Carbon (PAC) Filters is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
