The industry gross profit margin ranges from 24% to 36%.

Global production capacity in 2025 was about 700.00 k tons.

Powdered Anhydrous Aluminum Chloride is a highly hygroscopic inorganic compound with strong catalytic activity, mainly used as a catalyst for Friedel-Crafts reactions and an important raw material for organic synthesis, pharmaceuticals, dyes and chemical intermediates.

The industrial chain includes upstream aluminum ingots, chlorine, hydrochloric acid and purification raw materials. Midstream involves synthesis, dehydration, pulverization, drying and packaging. Downstream applications cover organic synthesis, pharmaceutical intermediates, dye intermediates, catalysts, detergent manufacturing and metal processing.

The market is driven by the development of fine chemicals, pharmaceuticals and dye industries. High-purity and ultra-fine powder products are increasingly demanded in high-end synthesis. Strict environmental protection and safety standards promote the upgrading of production technology. The expansion of catalyst and new material

applications supports stable growth. Future development will focus on high purity, ultra-fine particle size, low impurity and green production.
