A powdered plaster accelerator is a type of additive in powder form that is used in the plastering process. It is designed to speed up the setting and hardening time of plaster, allowing for faster construction and shorter project timelines. This powder is typically mixed with plaster during the preparation stage. It works by chemically interacting with the components of the plaster, promoting the formation of hydration products and accelerating the crystallization process, thereby enhancing the early - strength development of the plaster and enabling quicker drying and finishing.
