The global Power Adapter Module market size is predicted to grow from US$ 32330 million in 2025 to US$ 39630 million in 2032; it is expected to grow at a CAGR of 3.0% from 2026 to 2032.

In 2024, global Power Adapter Module production reached approximately 84 million units , with an average global market price of around US$ 382 per unit.

A Power Adapter Module (often abbreviated as PAM) is a compact, integrated electronic component or sub-assembly designed to convert, regulate, and supply stable electrical power to specific devices, systems, or components. Its core function is to address the mismatch between the input power source (e.g., AC mains, battery, or industrial power supplies) and the power requirements (voltage, current, waveform) of the target load—ensuring safe, efficient, and reliable power delivery.

Unlike a basic "power adapter" (e.g., a standalone phone charger), a "Power Adapter Module" is typically a board-level or embedded component (not a consumer-facing plug-in device). It is engineered to be integrated into larger electronic systems (e.g., industrial machines, medical equipment, aerospace devices, or IoT hubs) rather than used as a standalone accessory.

United States market for Power Adapter Module is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Power Adapter Module is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
