Battery structural parts include cylindrical and square structural parts. Among them, the manufacturing process complexity of the cover plate is usually much higher than that of the shell.

The important parts of the cover plate mainly include: ?Explosion-proof disc: Generally, the top cover of the lithium iron phosphate battery adopts a single explosion-proof valve design, and the opening pressure of the explosion-proof valve is generally 0.4?0.8MPa. When the internal pressure increases and exceeds the opening pressure of the explosion-proof valve, the explosion-proof valve will rupture at the nicks and open to release the pressure; ?Turning piece: In addition to the explosion-proof valve, the ternary system battery will also be superimposed with a combination of SSD turning piece design. Form, the opening pressure of the explosion-proof valve and the turnover pressure of the SSD are generally 0.75?1.05MPa and 0.45?0.5MPa respectively. When the internal pressure of the battery increases to the turning pressure of the SSD, the flip piece will lift up and cut off the current quickly; ?Pole: Mainly play a role in current conduction. Generally, the positive electrode adopts an aluminium pole, and the negative electrode adopts a copper-aluminium composite pole.
