The global Power Battery Main Circuit Relay market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The power battery main circuit relay is an electronic control device with a control system (input circuit) and a controlled system (output circuit). It uses a smaller current or voltage signal to control the larger current on and off in the power battery main circuit to achieve automatic control and protection of the circuit. In the power battery system, the relay is usually used to control the circuit connection and disconnection between the power battery and high-voltage components such as the motor controller and the charger. The working principle of the power battery main circuit relay is based on electromagnetic induction and contact action. When the control signal (such as the command from the battery management system) reaches the trigger threshold of the relay, the coil inside the relay generates electromagnetic attraction, attracts the armature and closes or disconnects the contacts, thereby controlling the on and off of the power battery main circuit.

United States market for Power Battery Main Circuit Relay is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
