## Abstracts

The global Power Battery Recycled Black Powder market size is predicted to grow from US\$ 1010 million in 2025 to US\$ 2475 million in 2032; it is expected to grow at a CAGR of 13.8% from 2026 to 2032.

Power Battery Recycled Black Powder refers to a fine particulate mixture rich in valuable metals such as lithium, nickel, cobalt, and manganese, obtained after discharged power batteries undergo dismantling, shredding, and separation processes; it serves as a critical intermediate feedstock for hydrometallurgical refining or direct cathode material regeneration. In 2025, this product segment achieved a capacity utilization rate of 73% and an average industry gross margin of approximately 50%. The upstream primarily consists of specialized recycling equipment manufacturers, including STEINERT GmbH (Germany), Batrium (Switzerland), Zhejiang Tianchang Intelligent Manufacturing Co., Ltd., and the Equipment Division of Brunp Recycling Technology Co., Ltd.; the midstream focuses on black powder production, composition optimization, and impurity removal through processes such as mechanical shredding, pyrolysis, sieving, and elemental enrichment; the downstream is primarily directed toward the production of regenerated cathode materials for traction and energy storage batteries, with key customers including CATL, BYD, LG Energy Solution, and Tesla. In 2025, production was approximately 215,000 tons at an average price of USD 4,800 per ton.

With the rapid growth of new energy vehicles, energy storage systems, and portable electronic devices, lithium battery recycled black powder, as a key intermediate rich in strategic metals such as nickel, cobalt, and lithium, is experiencing steadily increasing market demand. Its high metal recovery rate and excellent material performance provide significant value in reducing raw material costs, securing supply, and promoting the circular economy. Over the next five to ten years, policy support, technological

advances, and environmental requirements are expected to further unlock industry potential, positioning lithium battery recycled black powder as a core component in the global battery recycling ecosystem, driving supply chain optimization and generating substantial economic and sustainable development benefits.
