The report requires updating with new data and is sent in 48 hours after order is placed.

The power battery system (power battery PACK, battery pack) is the core energy source that provides driving electric energy for new energy vehicles, and is one of the most critical components of new energy vehicles. The power battery system is mainly composed of battery modules, electrical systems, thermal management systems, housings, and BMS components. The battery modules, electrical systems, thermal management systems, and BMS are packaged through the housings to form the main body of the power battery system. As the carrier of the battery module, the power battery system shell (battery shell) plays a key role in the stable operation and safety protection of the battery module. In addition to ensuring the strength, rigidity and collision safety requirements, it can also meet the IP67 protection of the electrical equipment shell Grade design requirements.
