The electric vehicle power exchange cabinet is a product for charging and replacing electric vehicles derived from the relevant laws and regulations formulated by the state for the code of conduct for electric vehicles. It greatly saves the charging time of electric vehicle users, and also greatly avoids a series of related disasters caused by electric vehicle charging.

Users can put the depleted battery into the battery compartment of the electric vehicle power exchange cabinet by scanning the code to replace the battery, and then a set of fully charged batteries will pop up from the electric vehicle power exchange cabinet for the user to use. The time for users to charge the electric vehicle is shortened, and the time cost is saved.

The electric vehicle power exchange cabinet adopts a unified centralized management for the electric vehicle battery, and with the corresponding intelligent power exchange system, the health status of the battery can be monitored around the clock. Make judgments on whether the battery is charged, whether the battery is fully charged, and whether the battery is harmful, quickly feedback it to the merchant, and control the risk. Permanently isolate hazards from end users.
