The global Power Ferrite Material market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The main characteristic of power ferrite is that it still maintains very low power consumption under the conditions of high frequency (hundreds of kilohertz) and high magnetic induction (thousands of Gauss), and its power consumption decreases with the temperature rise of the magnetic core. It reaches the lowest point around 80°, thus forming a virtuous cycle.
