The global Power Film Capacitor market size is predicted to grow from US$ 3293 million in 2025 to US$ 5487 million in 2031; it is expected to grow at a CAGR of 8.9% from 2025 to 2031.

Film capacitors, plastic film capacitors, film dielectric capacitors, or polymer film capacitors, generically called film caps as well as power film capacitors, are electrical capacitors with an insulating plastic film as the dielectric, sometimes combined with paper as carrier of the electrodes. The dielectric films, depending on the desired dielectric strength, are drawn in a special process to an extremely thin thickness, and are then provided with electrodes. The electrodes of film capacitors may be metallized aluminum or zinc applied directly to the surface of the plastic film, or a separate metallic foil. Two of these conductive layers are wound into a cylinder shaped winding, usually flattened to reduce mounting space requirements on a printed circuit board, or layered as multiple single layers stacked together, to form a capacitor body. Film capacitors, together with ceramic capacitors and electrolytic capacitors, are the most common capacitor types for use in electronic equipment, and are used in many AC and DC microelectronics and electronics circuits. The Power Film Capacitors industry can be broken down into several segments, AC Film Capacitors, DC Film Capacitors.

Global key players of Power Film Capacitor include Xiamen Faratronic, Panasonic, Yageo, Guangdong Fengming, Nichicon, etc. The top five players hold a share over 57%. Asia-Pacific is the largest market, and has a share about 89%, followed by North America and Europe with share 6% and 4%, separately. In terms of product type, DC Film Capacitor is the largest segment, occupied for a share of 57%. In terms of application, Automobile has a share about 28 percent.
