Power grid services also called power grid services, Power grid services ensure a proper operation of the power grid. The grid operators (transmission grid operators and distribution grid operators) are responsible for ancillary services. To ensure a reliable power supply, it is necessary that frequency, voltage, and power load remain within certain limits. This does not happen automatically, but through continuous corrections: namely, ancillary services. The most renowned service is probably the frequency control/balancing energy. Even in the event of a blackout, ancillary services help restart the power grid as quickly as possible. Power Grid Services include a wide variety of electrical efficiency and safety nets, all focussed on ensuring the power system delivers enough output to meet demand yet remains stable.

The global Power Grid Services market size is projected to grow from US\$ 9849 million in 2024 to US\$ 16060 million in 2030; it is expected to grow at a CAGR of 8.5% from 2024 to 2030.
