The global Power Inductors for Medical market size is predicted to grow from US\$ 73.62 million in 2025 to US\$ 134 million in 2032; it is expected to grow at a CAGR of 7.9% from 2026 to 2032.

Power inductors for medical typically refer to power inductors used in the power supply links of medical electrical equipment. These include surface-mount inductors and custom magnetic components used in critical applications such as switching power supplies, DC/DC converters, isolated power supplies, and decoupling filters. Structurally, they employ metal magnetic powder cores or ferrite cores combined with wire winding or thin-film processes to achieve high current carrying capacity and low losses within a limited volume.

In 2025, global Power Inductors for Medical sales reached approximately 321 Million Units, with an average global market price of around 234.4 US\$/K Units. Production capacity reached 400 Million Units, with a gross profit margin of approximately 32%.

Upstream, power inductors for medical applications rely on high-performance magnetic materials, enameled copper wire, and high-reliability encapsulating resins. TDK and Murata, in their technical documentation, emphasize reducing losses and improving DC bias performance through metallic magnetic powder cores and optimized winding structures.

Midstream consists of specialized magnetic component manufacturers. Taiyo Yuden offers medical-grade power inductors categorized under GHTE, providing a standardized and traceable device platform for medical power supply design. Bourns, KYOCERA AVX, and others offer a broad portfolio of power inductors covering

industrial, consumer, and network communications applications, with medical devices listed as a key application area in their application notes. Exxelia and Vanguard Electronics focus on high-reliability magnetic components; their medical solutions cover power and magnetic components for imaging equipment such as MRI, CT, and ultrasound, as well as custom inductors and transformers for implantable and wearable medical devices.

Downstream consists of large medical equipment manufacturers, in vitro diagnostic equipment manufacturers, monitoring equipment and implantable device manufacturers. Power inductors are embedded in power modules and signal links, working in conjunction with filters, capacitors and EMI shielding materials. Some manufacturers achieve system-level reliability and electromagnetic compatibility optimization through joint verification with magnetic component suppliers.
