## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Power Lithium Battery refers to the battery used to drive electric vehicles. This type of battery needs to have high energy density, high power density and good cycle life. Currently, the most common type of power battery used in electric vehicles is lithium-ion batteries because they offer excellent energy density and cycle life. The capacity of power batteries will continue to decrease as the number of uses increases. After the power declines to 80%, it will no longer be able to provide power for new energy vehicles and will have to face elimination and can only enter the recycling stage. EV Battery Recycling Service refers to the industry of recycling and processing used power batteries from abandoned electric vehicles. The industry's primary goal is to recycle valuable and hazardous materials in batteries, including lithium, nickel, cobalt, aluminium, etc., so that they can be reused instead of being sent to landfills or incineration facilities. The recycled EV Battery can be reused or dismantled into recyclable materials.

The global Power Lithium Battery Recycling market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
