A load center helps to provide safety to the homeowner, and maintenance personnel by housing all the branch circuits in one enclosure, helping to prevent coming in contact with energized electrical parts.

Load centers use plug-on circuit breakers to reliably distribute the electricity to circuits throughout a home or small building. Plug-on, refers to how the circuit breaker connects to the bus bar of the load center. The load center can provide safety from ground and arc faults by using specialty, or electronic circuit breakers.
