The research report highlights the growth potential of the global Power Over Ethernet (POE) Lighting market. Power Over Ethernet (POE) Lighting are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Power Over Ethernet (POE) Lighting. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Power Over Ethernet (POE) Lighting market.

Power over Ethernet (PoE) uses Ethernet cable networks to transmit power and data through one cable. Ethernet is a tested and trusted solution for transmitting data and low-voltage direct current (DC) power for everything from phone systems to cameras. PoE LED lights use the DC power from the Ethernet cable and eliminate the regularly required alternating current (AC) to DC conversion within each luminaire. As a result, less power is lost, making PoE lighting more energy efficient.

In North America, Cisco Systems, Cree, Philips Lighting, Molex and Innovative Lighting are the leaders of the Power Over Ethernet (POE) Lighting industry. The top 3 take about 46% market share.
