According to our LPI (LP Information) latest study, the global Power Steering Fluids market size was valued at US\$ 767.9 million in 2023. With growing demand in downstream market, the Power Steering Fluids is forecast to a readjusted size of US\$ 1035.1 million by 2030 with a CAGR of 4.4% during review period.

The research report highlights the growth potential of the global Power Steering Fluids market. Power Steering Fluids are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Power Steering Fluids. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Power Steering Fluids market.

Power steering fluids are prepared from mineral oil or synthetic oil by blending them with enhanced additives to suppress foaming, prevent corrosion, and to lubricate the power steering pump and steering gear.

The power steering fluids market is mainly driven by factors such as the growth of the automotive industry, the development of electric and hybrid vehicles, and the need for high-performance steering systems.

First, the growth of the automotive industry has led to a continuous increase in the demand for power steering fluids. Power steering fluids are essential for the operation of steering systems in automobiles. With the increase in automobile production and sales,

the demand for power steering fluids is also increasing.

Second, the development of electric and hybrid vehicles has also led to an increase in the demand for power steering fluids. Electric and hybrid vehicles need to have high-performance steering systems to ensure safe and efficient operation. Power steering fluids are essential for the operation of these high-performance steering systems.

Third, the need for high-performance steering systems has led to an increase in the demand for power steering fluids. Power steering fluids need to have high viscosity, low friction, high temperature resistance, and other characteristics to meet the requirements of high-performance steering systems. This requires manufacturers to continue to improve their production technology and process quality to improve product performance and reduce costs.

Finally, with the continuous improvement of technology, power steering fluids also need to have better environmental performance, such as low volatility, low toxicity, and recyclability. This requires manufacturers to develop new types of power steering fluids that meet environmental requirements.
