The global Power Supply Solutions market size is predicted to grow from US\$ 1154 million in 2025 to US\$ 1747 million in 2032; it is expected to grow at a CAGR of 6.1% from 2026 to 2032.

To address the problems of insufficient stability, a single energy structure, and high transmission losses in traditional power supply, power supply solutions have emerged. Since the establishment of the power grid system during the Second Industrial Revolution, with the continuous evolution of power generation technology, transmission networks, and intelligent control systems, power supply has developed from a centralized, unidirectional supply model to a comprehensive system encompassing renewable energy generation, efficient energy storage systems, smart microgrids, digital distribution management, and demand-side response. Contemporary power supply solutions are widely used in urban power grids, industrial parks, off-grid power supply in remote areas, data centers, and electric vehicle charging networks. Through multi-energy complementarity and intelligent scheduling, they significantly improve power supply reliability, energy utilization efficiency, and green and low-carbon levels, becoming a key infrastructure supporting the operation of modern society and energy transformation.
